

Javad Bajelan

uidopsu@gmail.com | Iran | 2004 | uidops.github.io | github.com/uidops | [LinkedIn](#)

EDUCATION

Azarbaijan Shahid Madani University

Bachelor of Science in Computer Science, GPA 17.91/20

Tabriz, Iran

Sep. 2022 – Aug. 2026

TEACHING EXPERIENCE

Teaching Assistant – Azarbaijan Shahid Madani University

Department of Computer Science

Computability Theory & Logic; Fundamentals of Logic; Statistical Methods

Tabriz, Iran

EXPERIENCE

Senior Backend Developer – Innovatex

innovatex.ae

United Arab Emirates

Mar. 2025 – Present

Senior Backend Developer – Meshtek

meshtek.com.tr

Turkey

Jul. 2024 – Mar. 2025

Backend Developer – ShayTech

shaytech.com

Iran

Feb. 2024 – Apr. 2024

PROJECTS

MSameX / *Cryptocurrency Exchange*

- Production cryptocurrency exchange platform supporting digital-asset trading workflows – www.msamex.com.

TirPay / *Digital Marketplace & Card Management*

- Digital marketplace and credit-card management platform with backend services and external integrations – app.tirpay.com.

IXNodes & IXMailer / *Infrastructure / Messaging*

- VPS infrastructure at ixnodes.com and mailing-system product IXMailer at ixmailer.com.

The Dolme Programming Language / *Go, Compiler Design, ARM64*

- Designed an LL(1) parser, syntax-directed translation, three-address-code IR, and interpreter – [GitHub](#).
- Implemented native ARM64 assembly generation and integration tests across interpreted and compiled output.

RISC-V libc / *C, RISC-V Assembly, Systems*

- Building an experimental C standard library for RISC-V 64 with low-level libc routines – [GitHub](#).
- Uses a cross-compilation workflow with RISC-V tooling and emulator-based validation.

DIVAN-LM / *Python, OCR, RAG, LoRA*

- Built a Persian legal-language pipeline covering OCR, retrieval-augmented generation, and vector search – [GitHub](#).
- Integrated LoRA fine-tuning and local model inference for applied LLM experimentation.

LOB Sequence Classification / *Python, PyTorch*

- PyTorch experiments for sequence classification on limit-order-book market data – [GitHub](#).

TECHNICAL SKILLS

Languages: Go, Python, C, Rust, x86 Assembly, RISC-V Assembly, Bash, Coq/Rocq, Haskell

Frameworks / Libraries: Go (Kratos, GORM, Gin, Echo, Fiber, gRPC); Python (Django, Flask, Pydantic, PyTorch, Transformers, Scapy); C (OpenMP, OpenSSL, pthreads, libcurl, libuv)

Developer / Debugging Tools: LLVM/Clang, GCC, GDB, LLDB, ASan, radare2, Ghidra, GNU Binutils (objdump, readelf), strace, ltrace, Valgrind, perf, tcpdump, Wireshark, Nginx

Backend / Systems: Microservices, Linux/Unix Systems Programming, POSIX APIs, Processes & Threads, Concurrency & Synchronization, Socket Programming, TCP/IP, Distributed Systems, REST/gRPC Services, Performance Analysis, Memory Debugging, Secure Coding, Load Balancing, Caching, Docker, CI/CD, GitHub Actions, Linux Administration, Infrastructure as Code (IaC), Firewalls

Algorithms / ML: Algorithm Development, Deep Learning, Transformer Architectures, Retrieval-Augmented Generation, LoRA/PEFT Fine-Tuning, Search Engines, Embeddings & Vector Search

Theoretical: First-Order Logic, Mathematical Logic, Computability & Complexity Theory, Type Theory, Category Theory, Lambda Calculus, Proof Theory, Denotational & Operational Semantics, Axiomatic Semantics, Intuitionistic Logic, Relational Model, Relational Algebra & Calculus, Schema Design & Normalization

AWARDS & ADDITIONAL

Award: First rank, university programming competition – Mar. 2026

Blog: uidops.github.io/blog

Languages: English, Persian
